Debt to capital employed (percent)	<b>16.5</b>	19.8	17.0	16.7	17.0	17.0	17.0	17.0

<sup>(1)</sup> Gross revenues and certain net earnings by segment for 2012 have been recast to reflect a change in the classification of certain trading transactions.

<sup>(2)</sup> Cash flow from operations is a non-GAAP measure. Refer to section 6 for a reconciliation to the GAAP measure.

<sup>(3)</sup> During the first quarter of 2013, the Company adopted IFRS 11, "Joint Arrangements" which required interest in a joint venture to be accounted for on an equity basis. Total assets presented in this Interim Supplemental Information reflects the adoption of IFRS 11 from December 31, 2012 onwards.

<sup>(4)</sup> The financial ratios constitute non-GAAP measures. Refer to section 6.

<sup>(5)</sup> Calculated for the 12 months ended for the dates shown.

<sup>(6)</sup> The calculation of return on capital employed for December 31, 2013 only was adjusted for the after-tax impairment charge of \$204 million related to Western Canada natural gas properties. Return on capital employed based on the calculation used in prior periods is 7.9% for December 31, 2013.

The following table is a summary of Husky's capital expenditures:

<i>Capital Expenditures Summary<sup>(1)</sup></i> (\$ millions)	Three months ended June. 30,		Six months ended June. 30,

<sup>(1)</sup> Dividend for the second quarter of 2014 is expected to be declared by the Board of Directors following the July 23, 2014 board meeting.

## 5. Cautionary Note Required by National Instrument 51-101

The Company uses the term barrels of oil equivalent (“boe”) which is calculated on an energy equivalence basis whereby one barrel of crude oil is equivalent to six thousand cubic feet of natural gas. Readers are cautioned that the term boe may be misleading, particularly if used in isolation. This measure is primarily applicable at the burner tip and does not represent value equivalence at the wellhead.

## 6. Non-GAAP Measures

Husky uses measurements primarily based on IFRS and also on secondary non-GAAP measurements. The non-GAAP measurements included in this Interim Supplemental Information are: return on equity, return on capital employed, debt to cash flow, debt to capital employed and cash flow from operations. None of these measurements are used to enhance the Company’s reported financial performance or position. These are useful complementary measurements in assessing Husky’s financial performance, efficiency and liquidity. With the exception of cash flow from operations, there are no comparable measures in accordance with IFRS. The non-GAAP measurements do not have a standardized meaning prescribed by IFRS and therefore are unlikely to be comparable to similar measures presented by other users. They are common in the reports of other companies but may differ by definition and application.

Return on equity is calculated as net earnings divided by the two-year average of shareholders’ equity. Return on capital employed is calculated as net earnings before impairment plus after-tax finance expense divided by the two-year average of long-term debt including long-term debt due within one year and total shareholders’ equity. The calculation of return on capital employed for December 31, 2013 was adjusted for the after-tax impairment charge of \$204 million related to Western Canada natural gas properties. Return on capital employed based on the calculation used in prior periods is 7.9% for December 31, 2013. Debt to cash flow is calculated as long-term debt and long-term debt due within one year divided by cash flow from operations. Debt to capital employed is calculated as long-term debt and long-term debt due within one year divided by capital employed.

This Interim Supplemental Information contains the term “cash flow from operations,” which should not be considered an alternative to, or more meaningful than “cash flow – operating activities” as determined in accordance with IFRS, as an indicator of Husky’s financial performance. Cash flow from operations is presented in Husky’s financial reports to assist management and investors in analyzing operating performance by business in the stated period. Cash flow from operations equals net earnings plus items not affecting cash which include accretion, depletion, depreciation, amortization and impairment, exploration and evaluation expenses, deferred income taxes, foreign exchange, stock-based compensation, gain or loss on sale of property, plant, and equipment and other non-cash items.

The following table shows the reconciliation of cash flow – operating activities to cash flow from operations and the related per share amounts for the periods noted:

		Three months ended June 30,		Six months ended June 30,	
		2014	2013	2014	2013
<i>(\$ millions)</i>					
GAAP	Cash flow – operating activities	1,147	1,225	2,483	2,540
	Settlement of asset retirement obligations	23	20	72	63
	Income taxes paid	285	232	381	373
	Interest received	(3)	(5)	(6)	(8)
	Change in non-cash working capital	52	(23)	110	(236)
Non-GAAP	Cash flow from operations	1,504	1,449	3,040	2,732
	Cash flow from operations – basic	1.53	1.47	3.09	2.78
	Cash flow from operations – diluted	1.52	1.47	3.08	2.78

Operating netback is a common non-GAAP metric used in the oil and gas industry. This measurement assists management and investors to evaluate the specific operating performance by product at the oil and gas lease level. The operating netback was determined as realized price less royalties, operating costs and transportation on a per unit basis.
