Western Canada Portfolio (excluding Heavy Oil and Oil Sands)

• Solid Western Canadian foundation

• Stable cash flow to fund growth

• 8.8 million net acres across British Columbia, Alberta, Saskatchewan and NWT

• 612 mmboe of proved reserves

Production¹
• Conventional: ~155,000 boe/d
  • ~54,800 bbl/d of oil (light & medium)
  • ~609 mmcf/d of gas
• Unconventional Oil: ~5,000 bbl/d
• Unconventional Gas: ~53 mmcf/d

¹(Production as at June 30, 2011)
Heavy Oil – Technology Opportunities

- Horizontal wells
- Thermal technologies
- New emerging technologies
- Midstream/Downstream Integration

(1) As at December 31, 2010
China

- Largest deep water gas discovery in the South China Sea
- Block 29/26 Gas Fields
  - Liwan 3-1 well advanced
  - Liuhua 34-2, appraisal is complete and submitted ODP
  - Liuhua 29-1, under appraisal
- Block 63/05
  - Seismic evaluation and exploration well in 2011
- Wenchang Oil Fields
  - 10,700 bbls/d of oil production in 2010

Indonesia

- Madura Strait PSC
  - Madura BD Gas Field - 44 mmboe of proved reserves booked in 2010
- North Sumbawa
  - Exploration drilling in 2011
Atlantic Region

**Today**
- 170 million barrels produced from White Rose¹
- 53,700 bbls/d of net production in Q2 2011
- North Amethyst development

**Near-term growth**
- West White Rose Pilot
  - First oil September 2011
- West White Rose full field development
- Evaluating fixed drilling platform
- Infill wells (White Rose Core Field)
- Greenland Value Acceleration Opportunity

**Longer-term growth**
- Mizzen deep-water delineation
- Labrador
- 23 Significant Discovery Areas

**Husky Energy Oil Sands Areas**
Husky Saleski land holding

Existing wells within acreage

2D seismic – existing

3D seismic – existing

2012 Program: 2D seismic to be acquired

32 wells to be drilled

Laricina pilot area
The Sunrise Energy Project

- World-class oil sands project utilizing established technologies
- In-situ SAGD development
- 50/50 joint venture with BP
- Regulatory approvals in place for initial phases up to 200,000 bbls/day
- Phase I (60,000 bbls/d gross) sanctioned and key contracts in place
- Drilling and construction underway
- Estimated cost of $2.5 billion for Phase I
Sunrise Phase I - Estimated Cost Structure

Program Area

- Site Wide Services
- Commissioning & Start-up/Owner's Cost
- Escalation & Contingency
- Drilling & Completion
- Facilities

$2.5 Billion
Cost Control Attributes

• Lump sum contracts

• Maximize offsite work
  – Minimize labor Constraint

• Early engineering with a focus on construction execution
  – Proven technology

• Leverage strong relationships with key suppliers due to Husky’s activity level
  – (Amongst the most active drillers in Western Canada)
Sunrise SAGD Well Drilling Operation Time Tracking

Currently running 17% under budget
Corporate and Overview

Husky’s Oil Sands Strategy

Conclusion & Recap
The Course is Set

- Clear strategy
- Experienced team
- Balanced capital: near, mid to long term
- Top quartile dividend
- Solid balance sheet and financial flexibility

Certain statements in this presentation are forward looking statements or information within the meaning of applicable securities legislation (collectively “forward-looking statements”). Any statements that express, or involve discussions as to, expectations, beliefs, plans, objectives, assumptions or future events or performance (often, but not always, through the use of words or phrases such as “will likely result,” “are expected to,” “will continue,” “is anticipated,” “estimated,” “intend,” “plan,” “projection,” “could,” “vision,” “goals,” “objective,” “target,” “schedules” and “outlook”) are not historical facts, are forward-looking and may involve estimates and assumptions and are subject to risks, uncertainties and other factors some of which are beyond the Company's control and difficult to predict. Accordingly, these factors could cause actual results or outcomes to differ materially from those expressed in the forward-looking statements.

In particular, forward-looking statements in this presentation include, but are not limited to: the Company's general strategic plans for its core business areas and anticipated outcomes of the Company's strategic plans; the Company's short, medium, and long-term growth strategies and opportunities in its upstream, midstream and downstream business segments; anticipated timing of upstream projects; production growth, reserve replacement, finding and development cost and operating cost targets; anticipated return on capital employed; the Company's financial strategy; 2011 and 2012 drilling plans in Western Canada; anticipated impact emerging technologies will have on production; expected rates and timing of production at South Pikes Peak, Paradise Hill and other heavy oil properties; potential application of known and emerging technologies to the Company's heavy oil properties; exploration plans for offshore China; exploration plans for offshore Indonesia; cost estimates and anticipated timing of production for the Sunrise Energy Project; anticipated breakdown of budget and costs for Sunrise energy project; 2012 exploration and drilling plans for Saleski; plans for the West White Rose Extension Pilot; exploration and development plans for the Atlantic Region and offshore Greenland.

Although the Company believes that the expectations reflected by the forward-looking statements in this presentation are reasonable, the Company's forward-looking statements have been based on assumptions and factors concerning future events that may prove to be inaccurate. Those assumptions and factors are based on information currently available to the Company about itself and the businesses in which it operates. In addition, information used in developing forward-looking statements has been acquired from various sources including third party consultants, suppliers, regulators and other sources.

The Company’s Annual Information Form and other documents filed with securities regulatory authorities (accessible through the SEDAR website www.sedar.com and the EDGAR website www.sec.gov) describes the risks, material assumptions and other factors that could influence actual results and are incorporated herein by reference.

Any forward-looking statement speaks only as of the date on which such statement is made, and, except as required by applicable law, the Company undertakes no obligation to update any forward-looking statement to reflect events or circumstances after the date on which such statement is made or to reflect the occurrence of unanticipated events. New factors emerge from time to time, and it is not possible for management to predict all of such factors and to assess in advance the impact of each such factor on the Company’s business or the extent to which any factor, or combination of factors, may cause actual results to differ materially from those contained in any forward-looking statement.
Disclosure of Oil and Gas Reserves and Other Oil and Gas Information

Unless otherwise stated, reserve and resource estimates in this presentation have an effective date of December 31, 2010. Unless otherwise noted, historical production numbers given represent Husky’s share.

The Company uses the terms barrels of oil equivalent (“boe”) and thousand cubic feet of gas equivalent (“mcfge”), which are calculated on an energy equivalence basis whereby one barrel of crude oil is equivalent to six thousand cubic feet of natural gas. Readers are cautioned that the terms boe and mcfge may be misleading, particularly if used in isolation. This measure is primarily applicable at the burner tip and does not represent value equivalence at the wellhead.

The Company has disclosed possible reserves. Possible reserves are those additional reserves that are less certain to be recovered than probable reserves. It is unlikely that the quantities actually recovered will exceed the sum of the proved plus probable plus possible reserves. There is at least a 10% probability that the quantities actually recovered will equal or exceed the sum of proved plus probable plus possible reserves.

The Company has disclosed discovered petroleum initially-in-place. Discovered petroleum initially-in-place is that quantity of petroleum that is estimated, as of a given date, to be contained in known accumulations prior to production. The recoverable portion of discovered petroleum initially-in-place includes production, reserves and contingent resources; the remainder is unrecoverable. A recovery project cannot be defined for these volumes of discovered petroleum initially-in-place at this time. The Company is currently in the process of reviewing all oil sands evaluations and additional drilling may be required to delineate the resources and advance development plans to allow booking of contingent resources and/or reserves in the future. At this time the McMullen, Caribou or Other projects do not have a commercial development plan that includes a firm intent to develop within a reasonable timeframe and there is a higher level of uncertainty in the estimates as a result of lower core-hole drilling density. There is no certainty that it will be commercially viable to produce any portion of the resources.

Oil Sands 3P reserves are disclosed in this presentation (slide 10). This represents the following split for 3P reserves: Sunrise - Proved reserves = 120.0 MMbbl, Probable reserves = 891.4 MMbbl, Possible reserves = 842.5; Tucker – Proved reserves = 61.9 MMbbl, Probable reserves = 103.2 MMbbl, Possible reserves = 121.9 MMbbl.

The estimates of reserves for individual properties in this presentation may not reflect the same confidence level as estimates of reserves for all properties, due to the effects of aggregation. The Company has disclosed its total reserves in Canada in its 2010 Annual Information Form dated February 28, 2011 which reserves disclosure is incorporated by reference herein.

The Company uses certain terms in this presentation, such as “discovered petroleum initially-in-place”, that the U.S. Securities and Exchange Commission's (“SEC”) guidelines strictly prohibit certain SEC registrants from including in filings with the SEC. U.S. Investors are urged to consider closely the disclosure in the Company’s Annual Information Form for reserve disclosure.

All currency is expressed in Canadian dollars unless otherwise noted.

± Gas Projects  
^ Heavy Oil Thermal Projects
Deliverables

- Defined organic projects driving production and reserves growth
- Maintain ~70% oil bias
- SE Asia gas production is oil price linked, resulting in higher value growth, prices range from $11-$13/mmcf
- Sunrise and Liwan projects will contribute in 2014/2015

Plan outcomes:
- Return on capital employed (increase by 5%)
- Production (3-5% CAGR) – high end of range
- Reserves replacement (increase by 140% annually)
- Netbacks
  - F&D (<$20/boe)
  - Operating Costs (<$15.50/boe)
